AI decision-support for Members of Parliament

Demo constituency · Coimbatore

// We don't help an MP spend ₹5 crore. We help unlock the hundreds of crores already owed to their people — and spend the ₹5 crore only on the gaps that nothing else covers.

₹463 crore

owed to Coimbatore

The system optimises the wrong number

An MP’s discretionary MPLADS fund is about ₹5 crore a year — tiny against a whole constituency’s needs. Meanwhile, far larger sums their constituents are already entitled to under central and state schemes never arrive. We fuss over the ₹5 crore and ignore the crores already owed.

The bottleneck isn't funding — it's translation

The money is unclaimed because no one connects an individual complaint to the specific scheme that owes it. Grievances arrive by voice, paper and photo, in Tamil, Hindi and English. The loudest wards dominate; the neediest, quietest villages stay invisible.

A two-floor model: unlock first, then spend

Basics done well, and a differentiator that reframes the job. The differentiator isn't spending the ₹5 crore better — it's unlocking the money already owed.

FLOOR 2 · DIFFERENTIATOR

Spend the ₹5 crore only on the gaps nothing else covers

- Quantify what is owed (gap-math)
- Find the forgotten, silent villages
- Optimise ₹5cr across true, uncovered gaps

FLOOR 1 · REQUIRED BASICS

Capture every complaint and unlock what's owed

- Capture · dedupe · locate every grievance
- Route each issue to the scheme that owes it
- Generate the letter that unlocks the money

One pipeline, eight working stages — no mocks

Every stage is a live component. Together they turn raw, multilingual, multimodal grievances into ranked, priced, actionable entitlements — with an audit trail.

Any language, any format — collapsed into one truth

Gemini 2.5-flash transcribes, translates and extracts each issue, then geo-resolves it to a Coimbatore ward or village. Deduplication is cross-language and campaign-aware.

300 → 245

raw complaints collapsed into unified issues,
across Tamil / Hindi / English.

 **Coordinated-campaign flag**

Suspiciously identical bursts are flagged so they
can't game priority and drown out genuine
need.

₹463 crore owed-but-undelivered to Coimbatore

Gap-math against what schemes are obligated to deliver — a defensible figure, not a projection. ₹308 crore of it is computed directly from real Census 2011 amenity gaps.

Data sources, labelled on screen

- Rural gap-math
Real Census 2011 village amenity MIS (237 villages)
- Geography
Real Coimbatore wards & villages
- Urban ward coverage
Modelled scheme coverage — stated openly
- Citizen complaints
Synthetic for privacy, mapped to real geography

Attention allocated by need — not by volume

A normal grievance system serves whoever complains loudest. We invert it: silent-village detection surfaces the villages with the highest need and almost no petitions.

TOP SILENT CASE

Jaganarai Slopes R.F.

need score

1.0

petitions filed

0

Highest possible need, zero citizen voice. Invisible anywhere else — surfaced here.

24

Coimbatore villages flagged with high need and near-zero petitions — the equity mechanism, made visible.

Unlock what's owed · spend what's left, well

One click turns a top issue into action on both tracks, then closes the loop with the citizen who reported it.

Runs today on Coimbatore — constituency-agnostic by design

Swap the geography and Census data and it works elsewhere. Built cloud-native on managed GCP services so it scales without re-architecting, and the Telegram bot means zero app install for citizens.

Coimbatore

live today · real geography

237 villages · real Census

Any constituency

same pipeline, new geography

543 across India

Zero app install	Citizens reach it through a Telegram bot they already have.
Managed & serverless	Cloud Run + BigQuery + Firestore scale with load, no ops burden.
Audit-ready	Every routed rupee traces to a source, a scheme and a letter.

Google Cloud throughout, end to end

A layered, cloud-native architecture: multimodal understanding, analytics, live state, geo-resolution and optimisation — behind a React dashboard and a Telegram bot.

6 dashboard screens include the Constituency X-Ray hero and Scan Petition.

Proven end-to-end on real Coimbatore data

Honest framing, no invented impact numbers: the mechanism works on real data. The realistic impact is unlocking entitlements that already exist and directing scarce discretionary funds to true gaps.

₹463 cr

surfaced as owed

₹308 cr from real Census 2011
